OUR LIVERPOOL PORT RAW MATERIALS OPERATION COMBINES INTELLIGENT TECHNOLOGY WITH BEST IN CLASS SERVICE.

PORT BASED OPERATION

In a complex environment of managing vessels and coordinating warehouse and transport operations, Warrant Group delivers a market leading solution with seamless customer service supported by innovative IT.

WMS SYSTEM

We have designed bespoke architecture for optimising port operations with an extended 4PL solution.

Our warehouse management system offers:

- Automatic default to free stock availability
- On-hold interim status at either customs or awaiting bank release
- Quarantined stock compliance
- Physical stock records can be segmented by:
 - Allocated and free
 - Picked awaiting despatch
 - Despatched
 - POD received
- Allocated stock allows traders to sell product without the call-off process taking effect
- Returns compliance

PORT MOBILE APP

Our port based operations team is linked via an intelligent mobile phone app that records both gate-in (vehicle arrived for stock collection) and gate-out (stock despatched en-route to delivery) real time movements; these records provide specific milestones for track and trace requirements.

Daily collection schedules are also managed via this app to streamline activity between warehouse and office based staff.

Predefined email alerts can be provided to any user as required.

4PL SOLUTION

Combining our technology and design skills, end users can plan their own supply chains within the system.

Clients are able to:

- View their allocated stock
- View gate-in and gate-out movements of their own orders
- View and print all relevant documentation
- View stock reporting functionality

SECONDARY DISTRIBUTION SOLUTION

Warrant Group's logistics services are ideally placed to provide closed loop transport solutions.

- We collaborate with dedicated Warrant subcontractors who specialise in raw material distribution
- All ancillary equipment and vehicle type requirements are booked and strictly managed
- We load cargo commensurate with strict delivery instructions
- Simultaneous communication of delivery schedules to traders and end users

DOCUMENTATION

Managing documentation requires robust implementation processes, adherence to ISO9001 certification and client standard operating procedures; we

- Take delivery of original documentation from traders and banks
- Manage original Bills of Lading
- Execute vessel agent clearance duties
- Provide proof of collection and delivery notes
