

SUPPLY CHAIN MANAGEMENT

SUPPLY CHAIN MANAGEMENT

WHERE INNOVATIVE THINKING AND TECHNOLOGY COMBINE TO CREATE DYNAMIC SUPPLY CHAIN SOLUTIONS.

ORIGIN CONSOLIDATION

Provides the ability to combine multiple part load shipments into one consolidated container. This desirable channelling of product creates cost benefits along the entire supply chain, by improving full container utilisation yields and minimising cost, by shipping stock on a cubic capacity only basis.

VENDOR MANAGEMENT

With an uploaded order book, we ensure production is on track and that each weekly FOB window is not compromised, ensuring suppliers meet all budgeted ex-factory dates.

Documentation disciplines and vendor seminars also form part of our vendor management programme.

VISIBILITY

Ingot offers exceptional track and trace functionality with real time, first screen filtering and a built-in navigation panel that complements its user friendly GUI. It possesses both documentation and invoicing upload attributes as well as a full reporting menu.

E-BOOKING

Through pre-configured templates our e-booking platform allows shippers to streamline the repetitive nature of placing orders.

It simplifies the data input process and enables shipments to be tracked and validated.

E-booking improves data integrity as well as delivering shipper administration and telecommunication cost benefits.

PERMISSION TO SHIP

We manage order book criteria through a robust set of business rules to ensure manufacturing problems are highlighted prior to container stuffing.

Our solution will ensure logistics costs reflect budgetary forecasts, order book corruption is eliminated, wastage is reduced and costs are brought closer to the point of sale.

ONLINE ORDER APPROVALS

This direct approval app manages vendor performance at origin allowing users to approve or reject orders online.

IMPLEMENTATION

Warrant Group's implementation handbook provides robust governance on procedure and process irrespective of project scale or complexity. Implementation plans and schedules are defined so work streams can be formed and milestone dates set.

STANDARD OPERATING PROCEDURES

Standard operating procedures are updated monthly and available online, they act as a key component in monitoring global processes.

PURCHASE ORDER MANAGEMENT

Combining all these attributes forms the heartbeat of our POMS solution.

Our solution is logical, proven and delivers cash flow benefit whilst also enhancing stock integrity.
